

OLIVER

WHAT IS OLIVER POS?

Oliver POS is a Point of Sale (POS) system built to seamlessly unite e-commerce with physical sales. Typically, in-store and online sales run fully separate from one another, causing problems in inventory, database management and lost time. When a shop owner who saw these issues first-hand had had enough headaches, they decided to create their own solution; a POS which is fully in sync with their website around the clock.

OLIVER POS FEATURES

- POS Register
- Oliver POS Extensions
- Integrated Payments
- Customer Management
- Reporting Tools
- POS Hardware

Oliver POS integrates with the millions of WordPress websites which run on the **WooCommerce** e-commerce platform, with a framework to integrate with other e-commerce solutions in the future.

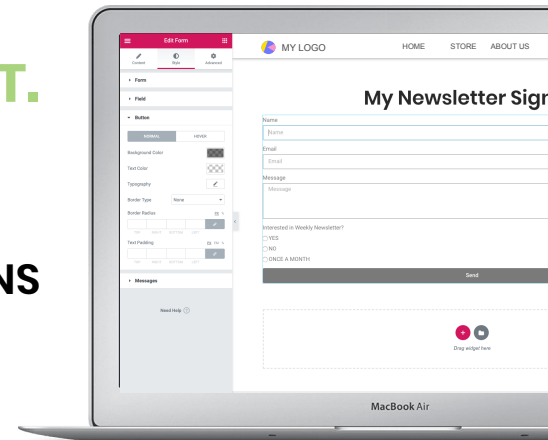

The **POS Register** is the core function of **Oliver POS**. Accessed through any web browser, the POS Register allows **WooCommerce** users to sell their products they've created online in a physical location with one online database. One database unifies online and in store sales by constantly syncing customers, orders, products, settings + more to **Oliver POS**.

WHY ARE WE DIFFERENT?

Oliver POS has built itself to be uniquely classified as the world's first **Point of Sale Operating System**.

CONNECT. SELL. BUILD.

EXTENSIONS

Oliver POS Extensions is an open-source aspect of the software which allows users to develop and build custom integrations with unique **plugins** they have built or installed on their website. This creates custom checkout experiences for users and customers, and allows for endless possibilities at the Point of Sale.

Integrating the Point of Sale with online sales while creating a platform for users to build custom software atop classifies Oliver POS as the first Point of Sale Operating System in its competing sphere.
